(3)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Leave
blank

Question 1 continued

This image shows a full page of blank, lined paper. It features approximately 28 horizontal blue or grey lines spaced evenly apart, typical of notebook paper. The lines extend across the entire width of the page, leaving small margins at the top and bottom. There are no vertical lines, text, or other markings on the page.

Q2

BLANK PAGE

3. The following table shows the height x , to the nearest cm, and the weight y , to the nearest kg, of a random sample of 12 students.

x	148	164	156	172	147	184	162	155	182	165	175	152
y	39	59	56	77	44	77	65	49	80	72	70	52

- (a) On the graph paper on page 9, draw a scatter diagram to represent these data. (3)

- (b) Write down, with a reason, whether the correlation coefficient between x and y is positive or negative. (2)

The data in the table can be summarised as follows.

$$\Sigma x = 1962, \quad \Sigma y = 740, \quad \Sigma y^2 = 47\,746, \quad \Sigma xy = 122\,783, \quad S_{xx} = 1745.$$

- (c) Find S_{xy} . (2)

The equation of the regression line of y on x is $y = -106.331 + bx$.

- (d) Find, to 3 decimal places, the value of b . (2)

- (e) Find, to 3 significant figures, the mean \bar{y} and the standard deviation s of the weights of this sample of students. (3)

- (f) Find the values of $\bar{y} \pm 1.96s$. (2)

- (g) Comment on whether or not you think that the weights of these students could be modelled by a normal distribution. (1)

Question 4 continued

This image shows a full page of blank, lined paper. It features approximately 28 horizontal blue or grey lines spaced evenly apart, typical of notebook paper. The lines extend across the entire width of the page, leaving small margins at the top and bottom. There are no vertical lines, text, or other markings on the page.

Q4

(Total 8 marks)

5. Articles made on a lathe are subject to three kinds of defect, A , B or C . A sample of 1000 articles was inspected and the following results were obtained.

31 had a type A defect
 37 had a type B defect
 42 had a type C defect
 11 had both type A and type B defects
 13 had both type B and type C defects
 10 had both type A and type C defects
 6 had all three types of defect.

- (a) In the space below, draw a Venn diagram to represent these data. (6)

Find the probability that a randomly selected article from this sample had

- (b) no defects, (1)

- (c) no more than one of these defects. (2)

An article selected at random from this sample had only one defect.

- (d) Find the probability that it was a type B defect. (2)

Two different articles were selected at random from this sample.

- (e) Find the probability that both had type B defects. (2)

Question 5 continued

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Q5

(Total 13 marks)

- (a) Write down the name of the distribution that could be used to model this random variable.

- (b) Give an example of such a distribution. (1)

- (c) Comment on the assumption that each value is equally likely. (2)

- (d) Suggest how you might refine the model in part (a). (2)

7. The random variable X is normally distributed with mean 79 and variance 144.

Find

(a) $P(X < 70)$, (3)

(b) $P(64 < X < 96)$. (3)

It is known that $P(79 - a \leq X \leq 79 + b) = 0.6463$. This information is shown in the figure below.

Given that $P(X \geq 79 + b) = 2P(X \leq 79 - a)$,

(c) show that the area of the shaded region is 0.1179. (3)

(d) Find the value of b . (4)
